

The first problem that i faced was my main html file “frontier.html” not linking to the second page even though the code has been correctly written.

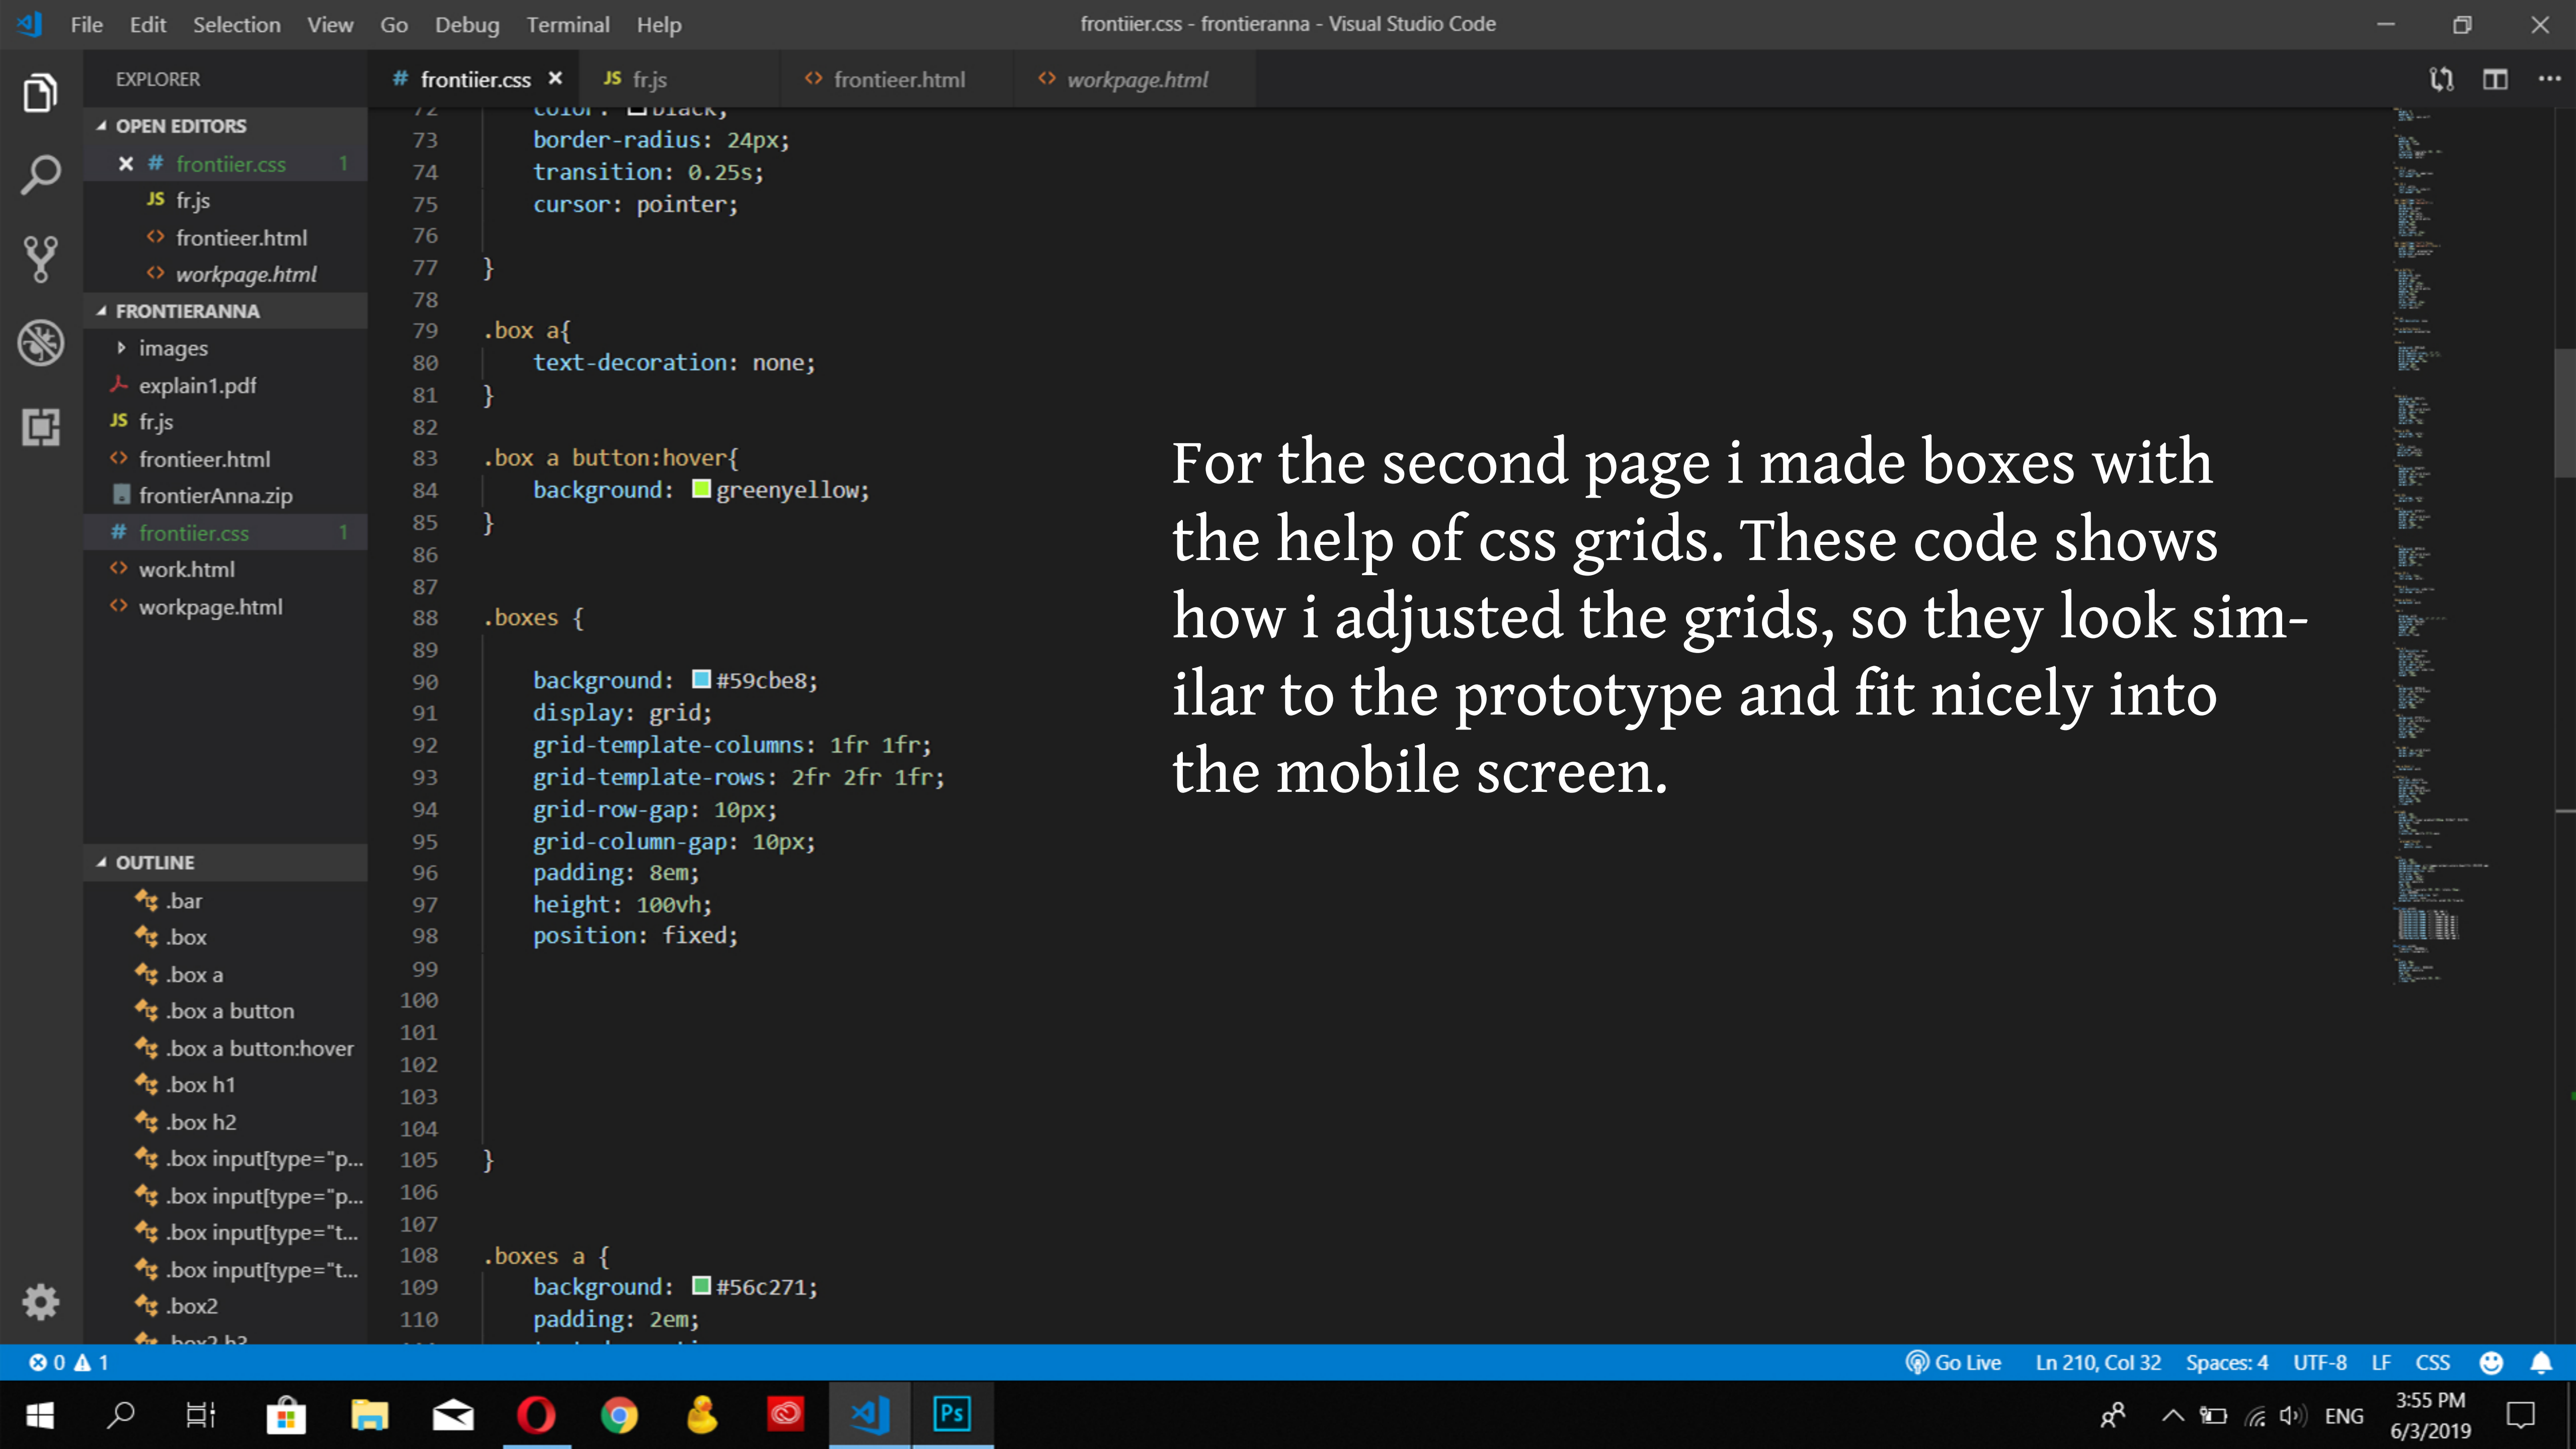

I linked my ‘log in’ button with the second page “work.html” but it is still not transferring me to the page i needed.

At some point i even tried to link the first page to the third one which was also a failure.

For my animation I did a WELCOME sign and i gave it a class of preload and made it the first thing in the body.

```
1 <!DOCTYPE html>
2 <html lang="en">
3
4 <head>
5   <meta charset="UTF-8">
6   <meta name="viewport" content="width=device-width, initial-scale=1.0">
7   <http-equiv="X-UA-Compatible" content="ie=edge">
8   <title>FRONTIER</title>
9   <link rel="stylesheet" href="frontier.css">
10  <script src="fr.js"></script>
11
12  Lorem Ipsum
13 </head>
14
15 <body>
16   <div class="preload">
17     <div class="text">
18       WELCOME
19     </div>
20     <div class="bar">
21       <div id="fill"></div>
22     </div>
23   </div>
24
25   <form class="box" action="index.html" method="post">
26     <h1> >FRONTIER</h1>
27     <h2>Get Started</h2>
28     <input type="text" name="" placeholder="Username">
29     <input type="password" name="" placeholder="Password">
30     <a href="work.html">
31
32       <button>LOG IN</button>
33     </a>
34   </form>
35 </body>
36
37 </html>
38
```

For the second page i made boxes with the help of css grids. These code shows how i adjusted the grids, so they look similar to the prototype and fit nicely into the mobile screen.
